Snapchat

- There is a part of snapchat called “My eyes only”
- It is protected by a 4 digit passcode
- Don’t be fooled: generally, the young person will know this code as they have to create the code themselves when setting the account up.
- This is the part of Snapchat which is normally used to hide things.

WhatsApp

- On WhatsApp at the top of messages there is a box that says “archived”.
- This will open a hidden menu of chats that are not displayed on the main message screen.
- Messages can still be sent and received while the chat is archived and is often a place people hide messages they don't want to be seen.

Hidden photos on iPhones

- On iPhones when on the albums menu on the photos app.
- Scroll to the bottom of the page and there are two items:
 - One being deleted items
 - And the second being an album called hidden.
- These are protected by either face id or a password.
- The passcode is the same as the passcode to unlock the phone.
- This is another place young people often hide things.

Hidden apps on iPhones

- On iPhones, continually swipe to the left
- After scrolling off the last page of apps you will come across a long list called app library
- This shows all apps on the phone including ones that are not displayed on the home page.

Hiding apps

- There are apps mainly ones disguised to look like a calculator
- These are hidden file apps
- When a specific passcode is typed in to the calculator screen, the app will reveal its true face and will display the files.
